

# Virtual Factory<sup>®</sup>

## Now on the iPhone

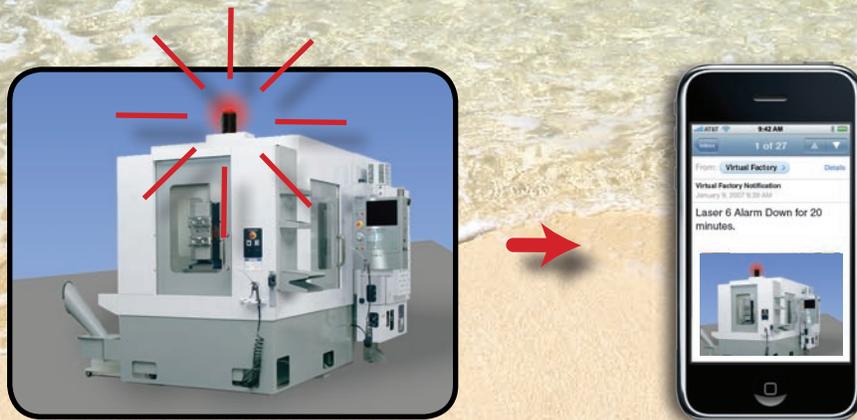

### Monitor Your Factory From Anywhere!

See your factory on your iPhone! Monitor your factory status, display summary reports, and receive critical "event" notifications. The interactive 3D model shows real-time status with full color and animation.

*Your factory is at your fingertips.*

Get the real-time status of your factory!

If something goes wrong, Virtual Factory<sup>®</sup> can notify you immediately; even at the beach!

## Virtual Factory® Helps You Improve and Stay Competitive

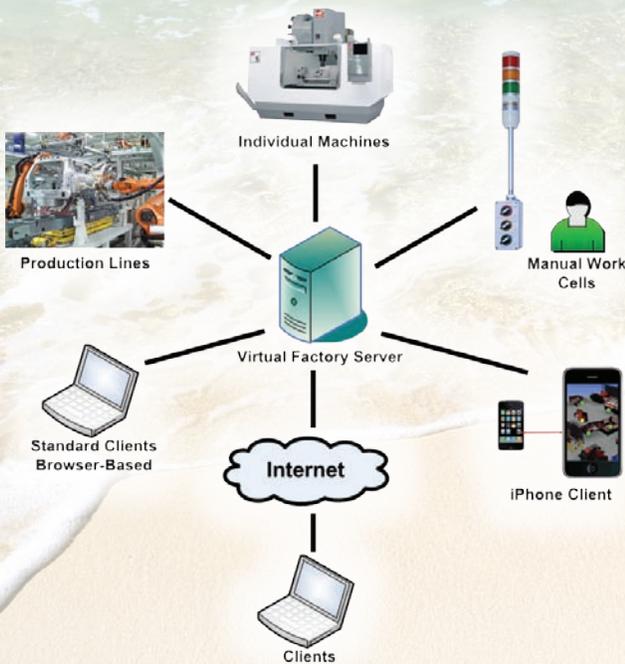

Use your iPhone to see detailed reports of the whole factory or individual machines. The Andon Status Panel shows the status of all machines and key performance indicators. The layouts are user-customizable, with various fonts, colors, and text strings.

**Andon Status Panel**

Virtual Factory collects data from your machines and manual work cells and saves all relevant information in a database for later analysis. Numerous status reports and graphs summarizing your factory's performance are readily available to help guide your continuous improvement efforts. From simple stack light (Andon) signal monitoring applications to complex multiple production line efficiency and scrap monitoring systems, Virtual Factory® will help you improve and stay competitive. We have over 300 installations worldwide to date.
